

Happy New Year from Tier Tech International!

As we say goodbye to 2025, we also bid farewell to one of our earliest employees, Dale Brouse, as he embarks on his retirement. Over the last two decades, Dale has been a constant: steady in judgment, generous in leadership, and unwavering in loyalty to mission and team. IED preparedness and resilience have markedly and measurably improved in hundreds of cities nationwide, a direct reflection of Dale's leadership, mentorship, and long-standing commitment to strengthening community readiness. We are grateful for his service and wish him all the best as he sets off on his next adventure.

We are also looking forward to helping our clients and customers tackle new complex and wicked challenges in 2026. TTI is able to adapt to new challenges quickly and efficiently to improve mission assurance and ensure success thanks in large part to our SDA methodologies, which allow us to make informed decisions and achieve desired outcomes in an ever-changing operating environment. Our methodologies are adaptable, and we are ready for the emerging threats our customers face.

Building effectively integrated c-UxS capabilities across 16 separate sectors of critical infrastructure is challenging. Our risk-informed SDA processes can assist in streamlining c-UxS strategies and integration across the USG and industry.

Unmanned Systems Threats Across the 16 Critical Infrastructure Sectors

The DHS Cybersecurity and Infrastructure Security Agency (CISA) has designated 16 critical infrastructure sectors, each of which have distinct functions, vulnerabilities, and regulators. Building effectively integrated counter unmanned systems (c-UxS) capabilities across these separate sectors of critical infrastructure is challenging. Our SDA processes can assist in streamlining c-UxS strategies and integration across

the USG and industry.

TTI is committed to addressing these challenges through comprehensive strategies that help communities build resilience and preparedness. Specifically, TTI's Risk-Informed Opportunity Sequences (RIOS) methodology serves as the synchronization engine, integrating risk and opportunity data streams to produce execution sequences that balance risk resilience with the enablement of proactive opportunities. This is but one example of many current and emerging threats that drive risks within our critical infrastructure.

[Read our latest blog.post](#) to learn more about these emerging threats.

From Risk to Readiness: Confronting Emerging and Asymmetric Threats

In 2026 the threat landscape is becoming more complex. Organizational readiness will be essential. Many of the threats ahead are already visible- cyber pressures, UAS/UxS proliferation, vulnerabilities in critical materials and supply chains, operational strain, and regulatory complexity.

Preparedness is essential and is less about anticipating every scenario and more about building systems that adapt when conditions change. Agencies that are proactively aligning policy, operations, and decision authority are better positioned to manage complexity with confidence rather than urgency.

We're prepared to help you move beyond reactive risk management and toward **true readiness**. Our methodologies are adaptable and engineered to help agencies prevail against wicked challenges. Our work focuses on strengthening the organizational mechanics that matter most during disruption- clear decision authority, tested procedures, and leadership alignment under pressure.
